Summary

Python Developer with 1.5+ years building production RAG pipelines, conversational AI platforms, and LLM fine-tuning workflows at CoRover.ai. I work across the full AI stack — from vector retrieval and Whisper ASR to OpenAI and Gemini API integrations — and have shipped systems used in enterprise and government deployments including IRCTC AskDisha 2.0.

Skills

Languages: Python, SQL — **Databases:** PostgreSQL, MongoDB, Redis, FAISS, pgvector

Frameworks & Tools: Flask, FastAPI, Docker, Jenkins, Git, Power BI, n8n

AI / ML: RAG Pipelines, Semantic Search, Vector Databases, LLM Fine-Tuning (LoRA/QLoRA), Unsloth, Whisper ASR, OpenAI APIs, Gemini APIs, Conversational AI, AI Agents

DevOps: CI/CD (Jenkins), API Deployment, Model Serving

Experience

CoRover.ai

Python Developer

Oct 2024 – Present

Bangalore, India

- Engineered **hybrid RAG pipelines** using FAISS and pgvector with Redis semantic caching, bringing semantic search latency under 200ms and cutting redundant LLM API calls by ~40% in production.
- Rebuilt retrieval into a multi-stage workflow — reranking, metadata filtering, contextual chunking — pushing LLM response accuracy ~30% above the baseline single-stage system on enterprise knowledge bases.
- Built a **Video-RAG platform** that ingests YouTube links and uploaded files, runs Whisper ASR transcription with timestamp segmentation, and returns exact source clips alongside AI-generated answers.
- Integrated **OpenAI Realtime APIs, Gemini APIs, and ElevenLabs TTS** for a streaming voice AI system; fine-tuned domain-specific LLMs with LoRA/QLoRA via Unsloth, cutting inference latency ~25% vs. full fine-tuning.
- Wired up **natural language to SQL** over CSV/XLSX datasets using schema-aware RAG, reducing analyst query turnaround from hours to under 2 minutes without writing any SQL manually.
- Set up **5+ Jenkins CI/CD pipelines** for backend APIs and AI inference services, dropping manual deployment effort by ~70% and achieving near-zero downtime across releases.
- Worked on **IRCTC AskDisha 2.0** backend during internship — ran quality audits and escalation tracking that reduced the bot escalation rate by ~15%.

Projects

AI-Powered Resume Screening & Interview Automation Platform

- Built a hiring automation tool in Python using Gemini and Whisper Live ASR — screens resumes, generates interview questions, and transcribes responses in real time, cutting recruiter screening from ~3 hours to under 20 minutes per candidate.
- Added structured evaluation output storing transcripts, skill scores, and per-candidate summaries; auto-generated HR reports cut post-interview documentation time by ~60%.

CollegiumBot – AI Campus Companion

- Wrote the full backend for a student-facing chatbot using semantic RAG and real-time retrieval; response relevance on campus FAQs came in above 85% after prompt engineering and retrieval tuning.
- Covered auth, knowledge module ingestion, and retrieval integrations end-to-end, rolling the platform out to the entire student body across academic and admin query types.

Education

B.Tech – Computer Science and Information Technology

Siddharth Institute of Engineering & Technology, Puttur (A.P)

2021 – 2024

CGPA: 7.55

Certifications & Achievements

- NPTEL – Internet of Things — APSCHE – 21st Century Employability Skills (Advanced)
- Awarded **Best Coordinator** (2022, 2023) and elected **President**, CSIT Association (2024).
