SKILLS

Languages: Python, SQL

Databases / Storage: PostgreSQL, MongoDB, Redis, FAISS, pgvector

Tools / Frameworks: Flask, FastAPI, Jenkins, Docker, Git, Linux, VS Code, PyCharm, Power BI, n8n

AI & ML Engineering: Retrieval-Augmented Generation (RAG), Semantic Search, Vector Databases, LLM Fine-Tuning, LoRA / QLoRA, Unsloth, Whisper ASR, OpenAI APIs, Gemini APIs, Conversational AI, AI Agents, Redis Caching

Deployment / DevOps: CI/CD Pipelines, Jenkins Deployment, API Deployment, Model Serving

Soft Skills: Problem Solving, Leadership, Communication, Team Collaboration

Languages Known: English, Telugu, Tamil, Hindi

EXPERIENCE

CoRover.ai — Python Developer

Feb 2025 – Present

Full-Time Role — Builder V2 Platform

- Engineered production-grade RAG pipelines using hybrid retrieval architectures for enterprise conversational AI systems.
- Designed scalable FAISS and PostgreSQL/pgvector-based vector retrieval systems for low-latency semantic search across enterprise knowledge bases.
- Built multi-stage retrieval workflows with reranking, metadata-aware retrieval, contextual chunking, and intelligent query routing to improve LLM response accuracy.
- Implemented Redis-based semantic caching and prompt caching layers reducing redundant LLM inference calls and improving production response latency.
- Integrated OpenAI Realtime APIs, Gemini APIs, and ElevenLabs TTS for real-time conversational AI systems with streaming inference capabilities.
- Fine-tuned LLMs using LoRA/QLoRA with Unsloth for optimized inference efficiency and domain-specific conversational performance.
- Automated CI/CD deployment workflows using Jenkins for backend APIs, AI services, and production inference pipelines.
- Built a multimodal Video-RAG platform enabling users to upload YouTube links and video files for conversational querying and contextual video understanding.
- Developed video ingestion pipelines supporting audio extraction, Whisper-based transcription, timestamp segmentation, semantic indexing, and transcript embedding workflows.
- Implemented timestamp-aware retrieval systems returning exact reference clips and source video segments corresponding to generated AI responses.
- Developed AI-powered structured analytics systems enabling users to query CSV and XLSX datasets using natural language interfaces and AI-generated SQL workflows.
- Built schema-aware RAG workflows for contextual understanding of structured datasets and analytical reporting pipelines.
- Collaborated with cross-functional engineering teams to deploy scalable AI systems serving production customer environments.

CoRover.ai — Python Developer Intern

Oct 2024 – Jan 2025

- Contributed to backend development of IRCTC's AskDisha 2.0 chatbot using Python and conversational AI workflows.
- Performed response quality analysis and escalation tracking for DigiSaathi bot to improve response accuracy and customer experience.
- Built automation scripts and monitoring utilities to improve chatbot stability and operational visibility.

PROJECTS

AI-Powered Resume Screening & Interview Automation Platform

- Built an AI-powered hiring automation platform for resume screening and AI-driven first-round interviews using Python, Gemini, Whisper Live ASR, and Unislo.
- Developed automated resume analysis pipelines for candidate skill extraction, role-based scoring, and AI-driven screening decisions.
- Integrated Gemini for contextual interview question generation and structured candidate evaluation workflows.
- Implemented real-time speech transcription pipelines for low-latency candidate response capture and transcript generation.
- Designed structured candidate evaluation systems storing interview transcripts, strengths, weaknesses, scoring metrics, and assessment summaries.
- Generated automated HR evaluation reports with candidate summaries, technical alignment insights, and interview analytics.

CollegiumBot – AI Campus Companion

- Designed and developed a conversational AI platform to assist students with academic and campus-related queries.
- Implemented contextual RAG pipelines with semantic retrieval and real-time response workflows.
- Built secure authentication systems, structured knowledge modules, and backend retrieval integrations.
- Improved response relevance using retrieval optimization and prompt engineering techniques.

NPCI Escalation Metrics Automation

- Developed Python automation pipelines to track, process, and report NPCI escalation metrics and operational insights.
- Automated reporting workflows reducing manual monitoring effort and improving operational visibility.
- Designed reusable data processing modules supporting scalable reporting and workflow integrations.

EDUCATION

B.Tech – Computer Science and Information Technology

Siddharth Institute of Engineering & Technology, Puttur (A.P)

2021 – 2024

CGPA: 7.55

CERTIFICATIONS

- NPTEL – Internet of Things
- APSCHE – 21st Century Employability Skills (Advanced)

ACHIEVEMENTS

- Awarded Best Coordinator (2022, 2023) for CSIT Association Events.
- Recognized as President of the CSIT Association Event (2024).
